

Year 1 Maths Programme of Study

Unit of Work	Statutory Objectives	Non Statutory
Number - number and place value	Count to and across 100, forwards and backwards, beginning with 0 or 1, or from any given number	Pupils begin to recognise place value in numbers beyond 20 by reading, writing, counting and comparing numbers up to 100, supported by objects and pictorial representations.
	Count, read and write numbers to 100 in numerals	
	Count in multiples of twos, fives and tens	They practise counting as reciting numbers and counting as enumerating objects, and counting in twos, fives and tens from different multiples to develop their recognition of patterns in the number system (for example, odd and even numbers), including varied and frequent practice through increasingly complex questions.
	Given a number, identify one more and one less	
	Identify and represent numbers using objects and pictorial representations including the number line, and use the language of: equal to, more than, less than (fewer), most, least	
	Read and write numbers from 1 to 20 in numerals and words	

Year 1 Maths Programme of Study

Number - addition and subtraction	Read, write and interpret mathematical statements involving addition (+), subtraction (-) and equals (=) signs	Pupils memorise and reason with number bonds to 10 and 20 in several forms (for example, $9 + 7 = 16$; $16 - 7 = 9$; $7 = 16 - 9$). They should realise the effect of adding or subtracting zero. This establishes addition and subtraction as related operations.
	Represent and use number bonds and related subtraction facts within 20	Pupils combine and increase numbers, counting forwards and backwards
	Add and subtract one-digit and two-digit numbers to 20, including zero	
	Solve one-step problems that involve addition and subtraction, using concrete objects and pictorial representations, and missing number problems such as $7 = \square - 9$.	They discuss and solve problems in familiar practical contexts, including using quantities. Problems should include the terms: put together, add, altogether, total, take away, distance between, difference between, more than and less than, so that pupils develop the concept of addition and subtraction and are enabled to use these operations flexibly.
Number - multiplications and division	Solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher.	Through grouping and sharing small quantities, pupils begin to understand: multiplication and division; doubling numbers and quantities; and finding simple fractions of objects.

Year 1 Maths Programme of Study

		<p>numbers and quantities.</p>
Number - fractions	<p>Recognise, find and name a half as one of two equal parts of an object, shape or quantity</p> <p>Recognise, find and name a quarter as one of four equal parts of an object, shape or quantity.</p>	<p>They make connections between arrays, number patterns, and counting in twos, fives and tens.</p> <p>Pupils are taught half and quarter as 'fractions of' discrete and continuous quantities by solving problems using shapes, objects and quantities. For example, they could recognise and find half a length, quantity, set of objects or shape. Pupils connect halves and quarters to the equal sharing and grouping of sets of objects and to measures, as well as recognising and combining halves and quarters as parts of a whole.</p>

Year 1 Maths Programme of Study

Measurement

Compare, describe and solve practical problems for:

- lengths and heights [for example, long/short, longer/shorter, tall/short, double/half]
- mass/weight [for example, heavy/light, heavier than, lighter than]
- capacity and volume [for example, full/empty, more than, less than, half, half full, quarter]
- time [for example, quicker, slower, earlier, later]

Pupils move from using and comparing different types of quantities and measures using non-standard units, including discrete (for example, counting) and continuous (for example, liquid) measurement, to using manageable common standard units.

measure and begin to record the following:

- lengths and heights
- mass/weight
- capacity and volume
- time (hours, minutes, seconds)

Recognise and know the value of different

In order to become familiar with standard measures, pupils

Year 1 Maths Programme of Study

	denominations of coins and notes	begin to use measuring tools such as a ruler, weighing scales and containers.
	Sequence events in chronological order using language [for example, before and after, next, first, today, yesterday, tomorrow, morning, afternoon and evening]	
	Recognise and use language relating to dates, including days of the week, weeks, months and years	Pupils use the language of time, including telling the time throughout the day, first using o'clock and then half past.
	Tell the time to the hour and half past the hour and draw the hands on a clock face to show these times.	
Geometry - properties of shape	Recognise and name 2-D shapes [for example, rectangles (including squares), circles and triangles]	Pupils handle common 2-D and 3-D shapes, naming these and related everyday objects fluently.
	Recognise and name 3-D shapes [for example, cuboids (including cubes), pyramids and spheres].	They recognise these shapes in different orientations and sizes, and know that rectangles, triangles, cuboids and pyramids are not always similar to each other.

Year 1 Maths Programme of Study

Geometry - position and direction

describe position, direction and movement, including whole, half, quarter and three-quarter turns

Pupils use the language of position, direction and motion, including: left and right, top, middle and bottom, on top of, in front of, above, between, around, near, close and far, up and down, forwards and backwards, inside and outside.

Pupils make whole, half, quarter and three-quarter turns in both directions and connect turning clockwise with movement on a clock face.
